Re: Proposed Telstra Tower at The Oaks.

To Whom It May Concern:

I believe that the tower at the location, & height as proposed, presents a hazard to aviation.

In the normal procedures followed during the day, it may not present a problem, however, if for any reason, an emergency arises, any object in that position, & at such a height, could not only pose a risk to the airfield users, but also to the general public.

Now would be the time to consider another location that would not affect air traffic.

Has Council, & Telstra considered the implications should an accident occur?

In my opinion, due care has not been considered regarding the location of this tower.
